Solo Giant Tesla Dancing w/ Additional Giant Tesla Coil

Trio including Visuals, Fire & Pyrotechnics Add-ons

Frequently Asked Questions

Lightning Dancing and Throwing... What's the difference?

- In Dancing shows, the performer(s) leap across the stage as they manipulate arcs of lightning that radiate from the Tesla coil itself.
- In Throwing shows, the performer stands atop a 9ft platform and throws lightning bolts down towards the stage. In these shows, the performer is the source of the electrical arcs.
- Some show packages include both Throwing and Dancing. In these, the finale features a performer standing on the platform throwing arcs of lightning down to the dancers on the stage.

Tesla and Giant Tesla... What's the difference?

- All Tier 2 packages are Tesla Packages. These use our standard Tesla coil that is 5ft tall and throws arcs of lightning 3-7 ft long. This coil is a great option for venues and events where space is a limiting factor.
- All Tier 3 packages are Giant Tesla Packages. Our Giant Tesla Coil is 8ft tall and throws arcs of lightning 7-12 ft long. These packages represent our full scale production.

How much space do we need for a show?

- Under each package you can find the Minimum Safety Area that must be free of all audience members in order to produce an incredible show.
- If you have more space, we can power up the coil so that it creates even longer arcs. Let us know how much space you have and we can create a safe and spectacular show within those dimensions.
